The HELLFIRE family of air-to-ground missiles provide precision-kill capability against heavy, advanced armor and individual hard point targets. HELLFIRE II and Longbow HELLFIRE are the primary anti-tank missiles used by the AH-64 A/D Apache, OH-58D Kiowa Warrior, Armed Reconnaissance Helicopter, and Special Operations aircraft. Laser HELLFIRE (A, C, F, K, M or N models) uses semi-active laser (SAL) terminal guidance. HELLFIRE II (K, M or N models) provides for point-target precision strike, defeats future advanced armor threat and non-armor targets, is effective against countermeasures, and is shipboard compatible. Longbow HELLFIRE (L model) is a millimeter wave, radar-aided inertial guidance missile that provides a fire-and-forget capability to engage targets both day and night, in adverse weather and with battlefield obscurants present. This capability will substantially increase the survivability of the AH-64 D Longbow Apache helicopter. Production buys support training, testing, fielding and deployment of these aircraft.

Justification:

FY2008 baseline funds will procure HELLFIRE AGM 114K model missiles. FY2008 GWOT Funding will procure 2,585 Laser HELLFIRE AMG 114N model missiles to maintain adequate inventory by replacing missile expenditures from Operation Iraqi Freedom and Operation Enduring Freedom, and bridge the gap to the Next Generation Air to Ground Missile.

FY2008 Base Appropriation: \$46.000 Million

FY 2008 GWOT: \$228.426 Million FY 2008 Total: \$274.426 Million

Quantity: Baseline: 360 GWOT: 2.585

The Laser HELLFIRE family consists of the A, C, F, K, M, N and P model missiles. These missiles provide air-to-ground precision strike and are designed to defeat individual hard point targets. The missiles have the capability for modular guidance section replacement. Laser HELLFIRE uses semi-active laser terminal guidance and is the primary anti-tank missile used by the AH-64 Apache, OH-58 Kiowa Warrior, Armed Reconnaissance Helicopter and special operations aircraft. The HELLFIRE II includes hardening of the laser seeker against countermeasures, further warhead improvements for the long term, replacement of the mechanical fuze with an electrical fuze, and restoration of the original length and weight. The M and N models were developed and fielded to the Army and the US Marine Corps and utilize blast fragmentation and thermobaric warheads.

Justification:

The FY08 GWOT funding will procure 2,585 Laser HELLFIRE Missiles (AGM-114N) to maintain adequate inventory by replacing missile expenditures from Operation Iraqi Freedom and Operation Enduring Freedom, and bridge the gap to the Next Generation Air to Ground Missile.

Guided Multiple Launch Rocket Systems (GMLRS) munitions are the Army's primary organic Joint Expeditionary, all-weather, all-terrain, 24/7, tactical range precision guided rockets employed by modular Fires Brigades supporting Brigade Combat Teams (BCT), Joint Expeditionary Force, and Joint Special Operations Force (JSOF) combatant commands. GMLRS are the primary munitions for units fielded with the High Mobility Artillery Rocket System (HIMARS) and MLRS M270A1 rocket and missile launcher platforms. GMLRS provides close, medium and long range pin point precision and massed fires to destroy, suppress and shape threat forces and protect friendly forces against: cannon, mortar, rocket and missile artillery; light materiel and armor; personnel; command and control; and air defense surface targets. GMLRS is a major upgrade/replacement for the aging M26A1/A2 rocket inventory that integrates a guidance and control package and an improved rocket motor achieving greater range and precision accuracy requiring fewer rockets to defeat targets than current artillery rockets, thereby reducing the logistics burden. There are two variants of GMLRS; GMLRS with Dual Purpose Improved Conventional Munitions (DPICM) and GMLRS with a 200-pound class high explosive warhead (Unitary). The GMLRS DPICM is a five nation cooperative program among France, Germany, Italy, United Kingdom and the United States. The GMLRS Unitary is a modification to the GMLRS DPICM, integrating a multi-mode fuze and high explosive (HE) insensitive munition (IM) warhead making it an all-weather, low collateral damage, precision rocket. The Unitary variant expands the MLRS target set into urban and complex environments and adds point targets. To meet a Central Command (CENTCOM) Urgent Need Statement (UNS), a quantity of 486 limited capability GMLRS Unitary rockets were accelerated and fielded in Iraq between June and December 2005. GMLRS Unitary demonstrated very high accuracy and low collateral damage. The Project Office is accelerating a quantity of 984 limite

Justification:

FY2008 GWOT dollars are for additional assets to prosecute the Global War on Terror by resetting items, replacing battle losses, generating and protecting forces, and enhancing military capabilities.

FY 2008 Base Appropriation: \$225.282 Million

FY 2008 GWOT: \$67.200 Million FY 2008 Total: \$292.482 Million

The Army Tactical Missile System (ATACMS) is the U.S. Army primary 24/7 all-weather surface-to-surface artillery precision missile used by current and future Joint Force Commands to shape the battlefield with long-range fires against hard and soft stationary targets in open, complex and urban environments. ATACMS continues to support the Global War on Terror. In Operation Iraqi Freedom (OIF), 479 ATACMS precision missile variants were launched from Multiple Launch Rocket System (MLRS) M270A1 and High Mobility Artillery Rocket System (HIMARS) launchers by the Joint Land Component Command and Joint Special Operations Command, providing critical Operational Shaping/Precision Strike fires. ATACMS Block IA Quick-Reaction Unitary (QRU) missile variant replaces the anti-personnel/anti-materiel submunitions in Block IA missiles and integrates a proven government-furnished unitary warhead (470-pound Standoff Land Attack Missile-Expanded Response/HARPOON) and fuze into the warhead section. The missile provides the Joint Force Command with a 24/7 all-weather 270 kilometer long-range fires capability to attack high-payoff, time-sensitive targets without placing aircraft and crews at risk. Its precision accuracy, along with the absence of potential submunition duds and reduced lethal radii, mitigate the warfighter's collateral damage concerns against hard and soft targets in complex and urban environments.

Justification:

FY2008 GWOT dollars are for additional assets to prosecute the Global War on Terror by resetting items, replacing battle losses, generating and protecting forces, and enhancing military capabilities.

FY 2008 GWOT: \$197.108 Million FY 2008 Total: \$197.108 Million

Quantity GWOT: 177
